Notes:

**a)** Classification of substance according to the Annex VI of Regulation (EC) No. 1272/2008 of the European Parliament and the Council listed in the safety data sheet.

(\*) For certain hazard classes, including acute toxicity and STOT repeated exposure; the classification according to the criteria in Directive 67/548/EEC does not correspond directly to the classification in a hazard class and category under this Regulation. In these cases the classification in this Annex shall be considered as a minimum classification. This classification shall be applied if none of the following conditions are fulfilled:

**NON-ELECTRIC DETONATOR**

Print date: 2. 4. 2012  
Revision date: 20. 1. 2016  
Version: 3.0

— the manufacturer or importer has access to data or other information as specified in Part 1 of Annex I that lead to classification in a more severe category compared to the minimum classification. Classification in the more severe category must then be applied;

— the minimum classification can be further refined based on the translation table in Annex VII when the physical state of the substance used in the acute inhalation toxicity test is known to the manufacturer or importer. The classification as obtained from Annex VII shall then substitute the minimum classification indicated in this Annex if it differs from it.

(\*\*) For certain hazard classes, e.g. STOT, the route of exposure should be indicated in the hazard statement only if it is conclusively proven that no other route of exposure can cause the hazard in accordance to the criteria in Annex I. Under Directive 67/548/EEC the route of exposure is indicated for classifications with R48 when there was data justifying the classification for this route of exposure. The classification under 67/548/EEC indicating the route of exposure has been translated into the corresponding class and category according to this Regulation, but with a general hazard statement not specifying the route of exposure as the necessary information is not available.

Full wordings of abbreviations and hazard statements are stated in section 2 and 16.

## SECTION 4: FIRST AID MEASURES

### 4.1 Description of first aid measures:

**General instruction:**

In the assembled detonator, the mixture is enclosed in a metal case that cannot be disassembled. If used in accordance with section 1.2, the exposition is not possible. The exposition can occur only in case of detonation in the form of post-detonation reaction products. Detonation may cause burns and injuries. In case of any suspicion, seek medical advice.

**Inhalation:**

Interrupt the exposition, move the exposed person to the fresh air. Keep the person warm and at rest. If the symptoms of respiratory system irritation (e.g. heavy breathing) persist, look for the medical help.

**Skin contact:**

In case of detonation, there is a risk of burns, general injuries and injuries caused by splinters. Seek medical advice.

**Eye contact:**

In case of detonation, there is a risk of general injuries and injuries caused by splinters. Seek medical advice.

**Ingestion:**

Rinse mouth, seek medical advice.

### 4.2 Most important symptoms and effects, both acute and delayed:

**Inhalation:** In case of inhalation of post-detonation reaction products, an irritation of respiratory system and a headache may occur.

**Skin contact:** Injuries, burns.

**Eye contact:** Injuries, burns.

**Ingestion:** If swallowed, seek medical advice.

**Unsuitable extinguishing agents:** Not stated.

**5.2 Special hazards arising from the substance or mixture:**

If a building containing the product is on fire, a high risk of explosion is involved. Perform an urgent evacuation of the building and its surroundings. Notify the Integrated Rescue System. Don't inhale the gasses of the fire because they contain heavy metals (lead). The combustion residues and contaminated extinguishing liquids must be disposed of according to valid regulations.

**5.3 Advice for fire-fighters:**

During the fire of the product, keep the safe distance, use suitable breathing protection (isolation device), or self-contained breathing apparatus.

**SECTION 6: ACCIDENTAL RELEASE MEASURES**

The measures to be taken in case of accidental leakage (e.g. traffic accident) depend on the scale of the accident and an expert opinion of a specialist.

**6.1 Personal precautions, protective equipment and emergency procedures:**

Warn away the trespassers. Remove possible sources of initiation and thermal agitation (open fire, electric sparks etc.). In case of risk of an explosion, evacuate the buildings and the surrounding area. Use appropriate means suitable for work to prevent contact with skin and eyes. Follow the direction in section 7 and 8.

**6.2 Environmental precautions:**

Do not allow the mixture to enter into sewer, water system (underground water, surface water) or soil.

**6.3 Methods and material for containment and cleaning-up:**

Pick up the spilled product mechanically using spark-free tools. Collect the product in approved and properly labelled containers. Disposal of damaged product may be performed only by an authorized person. Disposal of the contaminated material must be in accordance with section 13.
